

AMERICAN LIMESTONE COMPANY & THE ALC SOLUTION

Millions of years ago, when Texas prairies lay at the bottom of a vast ocean, Nature began work on a masterpiece. The radiance, remarkable spectrum of colors and durability of this creation is available to you today in our American Limestones. With these, no man-made product can compare.

But American Limestone Company provides much more than traditional natural limestone products.

As a result of an on-going research and development program, we at American Limestone are able to offer our customers a product unique in the industry:

THE ALC SOLUTION.

THE ALC SOLUTION consists of standardized natural limestone architectural elements and a revolutionary installation system.

Available in our two most popular stones, BURNISHED SILVER and COTSWOLD, ALC SOLUTION standard elements include such items as 1"-thick panels, moldings, balustrades, columns, pilasters, dimensional blocks, and fireplace surrounds. Elements are shipped in standard sizes and lengths to be cut-to-fit on the job site.

Our panels, moldings and other compatible elements are installed using our anchor system. Working drawings for all our architectural elements as well as installation guides are included in this Manual and online at our website.

Should you have any questions, our Dallas-based staff would be happy to answer them. If you are interested in specifying our stone on your project, we can provide pricing, test results and fabrication information. With typical Texas restraint and modesty, we say that you will be delighted with the beauty, quality and the price!
